

Smart Dual Color Pre-Stained Protein Standard

● PACKAGE

Product Name:

Smart Dual Color Pre-Stained Protein Standard

Quantity: 250 µl/vial

● PRODUCT INFORMATION

Cat. No: M00442**Storage Buffer:** 100 mM Tris-HCl (pH 6.8), 5 mM EDTA, 10 mM DTT, 10% glycerol, 1% SDS, 0.01% phenol red.**Storage:** -20°C

● PRODUCT DESCRIPTION

GenScript's Smart Dual Color Pre-Stained Protein Standard is used to roughly estimate molecular weight of protein samples on SDS-PAGE gel, and evaluate the western transfer efficiency. The standard consists of seven pre-stained proteins in the range of 14 to 100 kDa. The protein of 14 kDa is covalently coupled with bright yellow dye for easy orientation, and the other protein of 50 kDa is covalently coupled with orange dye for easy orientation. The other proteins are covalently coupled with blue dye for easy visualization. Smart Dual Color Pre-Stained Protein Standard is supplied in gel loading buffer and can be applied directly to a SDS-PAGE gel.

Each protein is present at the concentration of 0.4 µg/µl

● EXAMPLE

● APPLICATION

1. Monitoring protein migration during SDS-PAGE.
2. Verifying transfer efficiency on membranes for Western Blot.
3. Approximate sizing of proteins on SDS-PAGE gels.
4. Locating a protein of interest for excision from an unstained preparative gel.

● RECOMMENDATIONS

1. 5 µl per lane is recommended to load on mini gel.
2. This product is stable at -20°C for 12 months. It is recommended to aliquot the standard into small volume.
