Blood RNA Kit

Catalogue No.: abx098092

Blood RNA Kit provides a fast and easy method for the preparation of total RNA from 50 µl-1.5 ml of fresh or anticoagulated blood. Blood is lysed and DNA is digested with DNase I. RNA is bound to silica membrane. After washing, high quality RNA is eluted with free contamination of DNA and proteins. Purified RNA is suitable for RT-PCR, qRT-qPCR and northern blot.

Target: Blood RNA Kit

Storage: Store at -20°C. Stable for 12 months from date of receipt.

Note: This product is for research use only.
