

CDK4 Ab

| Cat.#: AF4034<br>Size: 50ul,100ul,200ul | Concn.: 1mg/ml<br>Source: Rabbit  | Mol.Wt.: 34kd<br>Clonality: Polyclonal  |
|---|---|---|
| Application:                            | WB 1:500-1:2000   |   |
| Reactivity:                             | Human   |   |
| Purification:                           | The antiserum was purified by p<br>chromatography using SulfoLinl<br>Fisher Scientific).  | oeptide affinity<br>k™ Coupling Resin (Thermo   |
| Specificity:                            | The Ab detects endogenous lev   | els of total CDK4 protein.  |
| Immunogen:                              | Peptide sequence around aa.29<br>from Human CDK4.   | 5~299(L-H-K-D-E)derived   |
| Uniprot:                                | P11802  |   |
| Description:                            | Cyclin-dependent kinase activit<br>phosphorylation (Thr172 in the<br>abundance of their cyclin partne<br>CDK inhibitors of the Cip/Kip or<br>inactive ternary complex of CDI<br>requires extracellular mitogenic<br>degradation of p27, which affect<br>restriction point and pRb-depen<br>active complex of CDK4/cyclin I<br>protein for phosphorylation, allo<br>transcription factors that activa<br>expression . In HeLa cells, upon<br>of p16 INK4A association with C<br>delay, implicating CDK4/cyclin I<br>through the G2-phase of the ce | case of CDK4), by the<br>ers, and by association with<br>INK family of proteins . The<br>K4/cyclin D and p27 Kip1/Cip1<br>to stimuli for the release and<br>the progression through the<br>ident entry into S-phase . The<br>D targets the retinoblastoma<br>owing the release of E2F<br>te G1/S-phase gene<br>UV irradiation, upregulation<br>CDK4/cyclin D3 leads to a G2<br>D3 activity in progression |
| Subcellular Location:                   | Cytoplasm. Nucleus. Membrane<br>complexed. Forms a cyclin D-CI<br>cytoplasm as cells progress thre<br>complex accumulates on the nu<br>the nucleus on transition from C<br>in nucleoli and heterochromatin<br>after release into the nucleus.   | DK4 complex in the<br>bugh G(1) phase. The<br>uclear membrane and enters<br>G(1) to S phase. Also present   |
| Similarity:                             | Belongs to the protein kinase su<br>protein kinase family. CDC2/CD  |   |
| Storage Condition and<br>Buffer:        | Supplied at 1.0mg/mL in phospl<br>Mg2+ and Ca2+), pH 7.4, 150m<br>and 50% glycerol.   |   |

Western blot analysis of extracts from HUVEC cells using CDK4 Ab

<code>IMPORTANT:</code> For western blot, incubate membrane with diluted primary Ab in 5% w/v milk , 1X TBS, 0.1% Tween®20 at 4°C with gentle shaking, overnight.
