Flow cytometric analysis of Human HVEM(CD270) expression on human whole blood lymphocytes. Cells were stained with PE-conjugated anti-Human HVEM(CD270). The fluorescence histograms were derived from gated events with the forward and side light-scatter characteristics of intact cells.

Flow cytometry was performed on a BD FACSCalibur flow cytometry system. Please refer to www.sinobiological.com/Flow-Cytometry-FACS-Protocols-a-750.html for technical protocols.
